M. Tech. Agriculture Technology

Programme Outcomes (POs):

- **PO:** 1 Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization for the solution of complex engineering problem.
- **PO:** 2 Problem analysis: Identify, formulate, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences and engineering sciences.
- **PO:** 3 Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for public health and safety, and cultural, societal, and environmental considerations.
- **PO: 4** Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- **PO:** 5 Modern tool usages: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools, including prediction and modeling to complex engineering activities, with an understanding of the limitations.
- **PO:** 6 The engineer and society: Apply reasoning informed by the contextual knowledge to assess Societal, health, safety, legal, and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- **PO:** 7 Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- **PO: 8** Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice
- **PO: 9** Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- PO: 10 Communication: Communicate effectively on complex engineering activities with the engineering community and with the society at large, such as, being able to comprehend and

write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO: 11 Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PO: 12 Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PROGRAMME SPECIFIC OUTCOMES PSO/PEO:

The Department of Agriculture technology & Agri informatics, Shobhit Institute of Engineering and Technology, Meerut, offers Two Year (comprising 4 semesters) Undergraduate Programme in Agriculture Technology with objective of empowering students to acquire all-inclusive understanding of Agriculture Technology as an academic discipline. Upon completion of M. Tech. Agriculture Technology Degree Programme successfully, the students shall acquire the following skills and competencies.

The objectives of this course are as follows;

PSO: 1 To teach student about the fundamentals of Agriculture and their application with IT like use of sensors for weather forecasting..

PSO: 2 To educate student in designing and creating apps used in agriculture for farm advises, market price and postharvest management.

PSO: 3 To develop skills which covers the diverse areas of IT application like drones for crop protection, water and nutrient management.

PSO: 4 To teach student about the use of information technology for Precision agriculture.

| Sahama and | Credit | L | T | P | | | | | | | |
| Scheme and Credits | 4 | 3 | 1 | 0 | | | | | | | |
| Objectives | | This course will help students to develop basic understanding of the programming anguages, its type and basic concepts of object orientation. | | | | | | | | | |

| | After studying this course, the student will be able to: |
|----------|--|
| | CO 1: Distinguish between different programming paradigms. |
| | CO 2: Choose an adequate programming paradigm in solving specific software engineering problems. |
| | CO 3: Apply at least one language from imperative, object-oriented and declarative |
| | paradigm. |
| | CO 4: Classify programming languages according to the paradigms they belong to. |
| | CO 5: Recognize the concepts of same kind from different programming languages |
| Outcomes | and paradigms. CO 6: Employ adequate naming and code organization conventions. |
| | |

| Unit | Content | Hours |
|----------|---|-------|
| Unit I | Nature of programming non-imperative languages languages: Imperative languages | 06 |
| Unit II | Scripting languages, Data-oriented languages, Object-oriented languages etc. | 06 |
| Unit III | Programming environments: Compilers and Interpreters, Interactive development tools, Run-time support environments, Debugging Tools, Testing Tools | 06 |
| Unit IV | Object Orientation: Basic concepts- objects, classes, methods, overloading methods, messages inheritance; Functional programming; Logic Programming | 06 |

| Objectives | organisations to improve or knowledge, tl | Knowledge Management (KM) as an emerging discipline deals with concept of how organisations, groups, and individuals handle their knowledge in all forms, in order to improve organisational performance. This course examines the organisation of knowledge, the selection and use of suitable knowledge representation methods or tools, the access to stored knowledge through search and retrieval techniques. | | | | | | | | | |
| Outcomes | After completion of this course, students will be able to: CO 1: Use a framework and a clear language for knowledge management concepts CO 2: Describe how valuable individual, group and organizational knowledge is managed throughout the knowledge management cycle CO 3: Define the different knowledge types and explain how they are addressed by knowledge management CO 4: Describe the major roles and responsibilities in knowledge management implementations CO 5: Identify some of the key tools and techniques used in knowledge management applications CO 6: Identify and evaluate major KM issues such as ethics, knowledge ownership vs. authorship, copyright, intellectual property and knowledge sharing incentives. | | | | | | | | | | |

| Course title | Climate chan | Climate change and its impact on agricultural production | | | | | | | |
| Scheme and | Credit | L | T | P | | | | | |
| Credits | 4 | 3 | 1 | 0 | | | | | |

| Objectives | This course explores the topic of climate change and global warming. We will begin by exploring how the Earth's global mean surface temperature is determined through a global "balancing act" of the rate of energy that comes from the Sun and the rate at which the planet returns that energy into space. We will also discuss the natural greenhouse effect, and how this contributes to a balanced global climate. | | | | | | | | |
|------------|--|-----------|--|--|--|--|--|--|--|
| | After studying this course, student should be able to: | | | | | | | | |
| | CO 1: Understand the physical basis of the natural greenhouse effect, include meaning of the term radiative forcing | ing the | | | | | | | |
| | CO 2: Know something of the way various human activities are increasing emmissions of the natural greenhouse gases, and are also contributing to sulphate aerosols in the troposphere | | | | | | | | |
| Outcomes | CO 3: Demonstrate an awareness of the difficulties involved in the detection unusual global warming 'signal' above the 'background noise' of natural value in the Eath's climate and of attributing (in whole or in part) any such signal that activity | riability | | | | | | | |
| | CO 4: Understand that although a growing scientific consensus has become established through the IPCC, the complexities and uncertainties of the scient provide opportunity for climate sceptics to challenge the Panel's findings. | nce | | | | | | | |
| Unit | Content | Hours | | | | | | | |
| Unit I | Climate and climate change, Global warming and climate change | 04 | | | | | | | |
| Unit II | Observed climate change and international responses | 04 | | | | | | | |
| Unit III | Effects of climate change, Tools and techniques for impacts assessment | 04 | | | | | | | |
| Unit IV | Policy and legislation: national and international scenarios, Future climate scenarios | 04 | | | | | | | |
| Unit V | Climate change adaptation, Climate change mitigation, Issues need attention, International Response and Individual Responsibility. | 04 | | | | | | | |

| Objectives | Students will demonstrate the ability to perform close and critical readings. Students will demonstrate the ability to consider critically the motives and methods of scholarship and the relationship between them. Students will demonstrate the ability to distinguish opinions and beliefs from researched claims and evidence and recognize that kinds of evidence will vary from subject to subject. For instance, some fields call for quantitative support while others work more commonly with quoted, textual evidence. Students will demonstrate the ability to ask disciplinarily appropriate questions of the material and recognize when lines of inquiry fall outside of disciplinary boundaries. Students will demonstrate the ability to evaluate, credit, and synthesize sources. |

— Concept and their Operationalization.

M. Tech (Agriculture Technology)

COs Mapping with POs & PSOs

AIMT-501 INTRODUCTION TO INFORMATION TECHNOLOGY

Course Outcome:

CO1: Understand the basic concepts of information technology, its history and approaches.

CO2: Learn different tools of information technology such as computers, operating systems etc.

CO3: Explain different information ecosystems and specialized application software.

CO4: Illustrate coding fundamentals and different coding languages.

CO5: Apply the concepts of information technology in real life.

AIMT-503 PROGRAMMING & PROGRAMMING PARADIGMS

Course Outcome:

- CO 1: Distinguish between different programming paradigms.
- CO 2: Choose an adequate programming paradigm in solving specific software engineering problems.
- CO 3: Apply at least one language from imperative, object-oriented and declarative paradigm.
- CO 4: Classify programming languages according to the paradigms they belong to.
- CO 5: Recognize the concepts of same kind from different programming languages and paradigms.
- CO 6: Employ adequate naming and code organization conventions.

AIMT -505 APPLICATIONS OF COMPUTER AND INFORMATION TECHNOLOGY IN RURAL DEVELOPMENT

Course Outcome:

This course will help the students to understand the basic concepts of computer and information technology and its applications in rural development.

After learning this course, students will be able to:

- CO 1: Explain the importance of computer and information technology in citizen service delivery
- CO 2: Discuss the role of computer and information technology in rural development
- CO 3: Highlight applications of computer and information technology in agriculture development.
- CO 4: Describe the role of computer and information technology and GIS in creating livelihood opportunities in rural communities.

AIMT -507 AGRICULTURAL ECONOMICS AND TRADE

Course Outcome:

- CO 1: The students will be learn to improve decision making about things like agricultural production methods, agricultural input levels and resource conservation etc.
- CO 2: Students should be able to communicate effectively, economic concepts, decision-making, and agricultural and trade concepts.
- CO 3: Students should have the skills to fit into a business, agency, or academic environment and use economic concepts to quantify and Analyse issues related to their employer's issues.

AIMT -502 DATABASE TECHNOLOGY AND APPLICATIONS

- CO 1: Explain the characteristics, architecture of database approach, describe the components, major functions of a database system and give examples of their use.
- CO 2: Compare and contrast appropriate data models, including concepts in modeling notation and how they would be used.
- CO 3: Create a relational database schema in SQL, use SQL to create a non-procedural query, write a stored procedure that deals with parameters and has some control flow, to provide a given functionality.
- CO 4: Familiarize with the related areas in databases and gaining familiarity with other popular databases used in the industry.

AIMT -504 INFORMATION RESOURCES, INFORMATION RETRIEVAL AND TECHNICAL COMMUNICATION Course Outcome:

- CO 1: Students will access, use and communicate information from a variety of technologies.
- CO 2: Students will seek alternative viewpoints, using information technologies.
- CO 3: Students will critically assess information accessed through the use of a variety of technologies.
- CO 4: Students will use organizational processes and tools to manage inquiry and technology to aid collaboration during inquiry.
- CO 5: Students will use technology to investigate and/or solve problems. Students will use electronic research techniques to construct personal knowledge and meaning.

AIMT -603 FARM HEALTH MANAGEMENT, EXPERT SYSTEMS AND ORGANIC AGRICULTURE Course Outcome:

- CO 1: The student will be able to explain the major aspects of agricultural practices and traditions through time and throughout the world.
- CO 2: The student will be able to explain in general the relationships among culture, economics, politics, science, and agricultural development.
- CO 3: A solid understanding of the cross-cultural interactions and exchange that linked the world's people and facilitated agricultural development is also expected.
- CO 4: The student will study and analyze the refereed-journal articles, texts, and practices that represent the perspectives of different societies and agricultural traditions.
- CO 5: To show how agricultural scientists are attempting to minimize agricultural pollution and sustain food production adequate for the world's population.

AIMT -605 E-GOVERNANCE, CLOUD COMPUTING, STANDARDS, INTEROPERABILITY AND DIGITAL PRESERVATION Course Outcome:

- CO 1: Analyse and explain the concepts of cloud computing.
- CO 2: Demonstrate the types and services in cloud computing.
- CO 3: Describe the Email Communications and Collaborating on Group Projects and Events.
- CO 4: Illustrate and Simulate Schedules and Task Management.
- CO 5: Develop Web-Based Communication Tools.

AIMT -521 DECISION SUPPORT SYSTEM

Course Outcome:

- CO 1: Distinguish among data processing systems, management information systems, and decision support/expert systems.
- CO 2: Integrate the major components of decision support systems (DSS) and expert systems (ES).
- CO 3: Capture decision rules based on knowledge provided by an acknowledged expert and codify those rules as assertions, rules, and ad hoc procedures.
- CO 4: Analyze how information is used to solve problems.
- CO 5: Utilize commercial spreadsheet and database integrated packages to develop "what if" simulation models to support the decision- making process.

AIMT -522 KNOWLEDGE MANAGEMENT

- CO 1: Use a framework and a clear language for knowledge management concepts
- CO 2: Describe how valuable individual, group and organizational knowledge is managed throughout the knowledge management cycle
- CO 3: Define the different knowledge types and explain how they are addressed by knowledge management
- CO 4: Describe the major roles and responsibilities in knowledge management implementations
- CO 5: Identify some of the key tools and techniques used in knowledge management applications
- CO 6: Identify and evaluate major KM issues such as ethics, knowledge ownership vs. authorship, copyright, intellectual property and knowledge sharing incentives.

AIMT -521 VALUE-ADDED SERVICES AND DIGITAL NETWORK INCLUDING WIRELESS AND SENSOR NETWORKS Course Outcome:

- CO 1. Understand the basics of information theory and coding techniques.
- CO 2. Determine the minimum number of bits per symbol required to represent the source and the maximum rate at which a reliable Communication can take place over the channel.
- CO 3. Describe and determine the performance of different waveform techniques for the generation of digital representation of signals.
- CO 4. Determine methods to mitigate inter symbol interference in baseband transmission system.
- CO 5. Describe and determine the performance of different error control coding schemes for the reliable transmission of digital representation of signals and information over the channel.
- CO 6. Understand various spreading techniques and determine bit error performance of various digital communication systems.

| | PO | PO 11 | PO 12 | PSO 1 | PSO 2 | PSO 3 | PSO 4 |

| CO 5 | 1 | | 2 | 1 | | | | 3 | | | 1 | | 2 | | 2 | |
| CO 6 | | 1 | 3 | | 3 | | | | 1 | 1 | | 1 | | 2 | | 3 |
| Average | 1.7 | 1.7 | 2.0 | 1.3 | 2.0 | 1.0 | 3.0 | 2.0 | 1.7 | 1.3 | 1.7 | 1.3 | 1.7 | 1.7 | 1.5 | 1.8 |

AIMT -524 AGRICULTURAL BIOINFORMATICS

- CO 1: To get introduced to the basic concepts of Bioinformatics and its significance in Biological data analysis.
- CO 2: Describe the history, scope and importance of Bioinformatics and role of internet in Bioinformatics.
- CO 3: Explain about the methods to characterize and manage the different types of Biological data.
- CO 4: Classify different types of Biological Databases.
- CO 5: Introduction to the basics of sequence alignment and analysis.
- CO 6: Overview about biological macromolecular structures and structure prediction methods.

| | PO | PO 11 | PO 12 | PSO 1 | PSO 2 | PSO 3 | PSO 4 |

| CO 6 | | | 3 | | 3 | 3 | | | | 1 | | | | 2 | | |
| Average | 2.3 | 2.0 | 2.0 | 2.0 | 2.0 | 2.0 | 2.5 | 1.3 | 1.5 | 1.3 | 2.0 | 2.0 | 1.3 | 1.3 | 2.3 | 1.5 |

AIMT -621 AGRICULTURAL CREDIT AND FINANCIAL INCLUSION

Course Outcome:

- CO 1: Understand the institutional and non-institutional sources of credit system and various banks related.
- CO 2: Basic components of business management in agriculture.
- CO 3: Analyse the factors associated with agricultural business.

| | PO | PO | PO | PO | PO | PO | PO | PO | PO | PO | PO 11 | PO 12 | PSO 1 | PSO 2 | PSO 3 | PSO 4 |

| CO 2 | | | 1 | | | | 3 | | 2 | | 3 | | | | 2 | 1 |
| CO 3 | 2 | | | 3 | | 1 | | | | | 2 | | 1 | | | |
| Average | 1.5 | | 1 | 2.5 | 2 | 1 | 3 | 1 | 2 | 1 | 2.5 | 1 | 1.5 | 1 | 1.5 | 1 |

AIMT -622 GEO INFORMATICS

Course Outcome:

- CO 1: Give examples of interdisciplinary applications of Geospatial Information Science and Technology.
- CO 2: Apply GIS analysis to address geospatial problems and/or research questions.
- CO 3: Demonstrate proficiency in the use of GIS tools to create maps that are fit-for-purpose and effectively convey the information they are intended to.
- CO 4: Effectively communicate and present project results in oral, written, and graphic forms.
- CO 5: Demonstrate confidence in undertaking new (unfamiliar) analysis using GIS, troubleshoot problems in GIS, and seek help from software/website help menus and the GIS community to solve problems.

| | PO | PO 11 | PO 12 | PSO 1 | PSO 2 | PSO 3 | PSO 4 |

| | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | | | | | | |
| CO 1 | 1 | | 2 | | | 2 | | 3 | 1 | 1 | | 1 | 2 | 3 | 1 | 1 |
| CO 2 | | | 1 | | | | 3 | | | | 3 | 2 | | 2 | | 2 |
| CO 3 | 2 | | | 3 | | 1 | | | 2 | | | | 1 | | 1 | |
| CO 4 | | 3 | | | 2 | | | 1 | | 2 | | 2 | | 2 | | 3 |
| CO 5 | | | | | | | | | | | | | 2 | | 3 | |
| Average | 1.5 | 3.0 | 1.5 | 3.0 | 2.0 | 1.5 | 3.0 | 2.0 | 1.5 | 1.5 | 3.0 | 1.7 | 1.7 | 2.3 | 1.7 | 2.0 |

AIMT -623 CLIMATE CHANGE AND ITS IMPACT ON AGRICULTURAL PRODUCTION

- CO 1: Understand the physical basis of the natural greenhouse effect, including the meaning of the term radioactive forcing
- CO 2: Know something of the way various human activities are increasing emissions of the natural greenhouse gases, and are also contributing to sulphate aerosols in the troposphere
- CO 3: Demonstrate an awareness of the difficulties involved in the detection of any unusual global warming 'signal' above the 'background noise' of natural variability in the Earth's climate and of attributing (in whole or in part) any such signal to human activity
- CO 4: Understand that although a growing scientific consensus has become established through the IPCC, the complexities and uncertainties of the science provide opportunity for climate sceptics to challenge the Panel's findings.

| Average | 2.5 | 2.5 | 1 | 2 | 1.5 | 1 | 3 | 1.5 | 1.5 | 1 | 3 | 2 | 1 | 2 | 1.5 | 3 |

AIMT -624 STRATEGIC RESEARCH AND EXTENSION PLAN (SREP) FOR AGRICULTURAL DEVELOPMENT Course Outcome:

- CO 1: To review the SREP methodology followed in the pilot districts with a focus on linkages and identification and prioritization of research, extension and development issues
- CO2: To analyse the mechanism followed in each state for implementation of SREP outputs in operationalizing strategies evolved
- CO 3: To identify the gaps in SREP methodology and its implementation process and suggest appropriate measures to overcome the gaps, and
- CO 4: To evolve future directions for up-scaling and institutionalization of SREP approach.

AIMT -581, AIMT- 582, AIMT- 681SEMINAR

- CO 1: Students will demonstrate the ability to perform close and critical readings.
- CO 2: Students will demonstrate the ability to consider critically the motives and methods of scholarship and the relationship bet them.
- CO 3: Students will demonstrate the ability to distinguish opinions and beliefs from researched claims and evidence and recontact that kinds of evidence will vary from subject to subject. For instance, some fields call for quantitative support while others more commonly with quoted, textual evidence.
- CO 4: Students will demonstrate the ability to ask disciplinarily appropriate questions of the material and recognize when lin inquiry fall outside of disciplinary boundaries.
- CO 5: Students will demonstrate the ability to evaluate, credit, and synthesize sources.
