Any Suggestions:

The industry-academia relationship can be strengthened by universities and industries collaborating on mutually agreed projects.

This way, the industry can ask the university to work on say, a production or HR or process problem with a team of professors and students who can then use their academic knowledge to solve an industrial problem. Such projects should be time bound and the feedback obtained from the industry should be further used to offer better solutions. Subsequently, such solutions can be shared with other industries having similar problems.

The same process should be applied to national and global level problems. For example, B Tech students should be encouraged to find cost effective solutions for detection of COVID symptoms and supply of oxygen to needy patients in collaboration with the industry. Subsequently, good and effective solutions can be commercialized and offered at cheaper and affordable prices to the masses.
